DEVOPS & TOOLS

Linux · Docker · Nginx · AWS
Git · CI/CD · Bash · VPS

INTERESTS

Cloud Infra · DevOps · Cybersecurity
Backend · Open Source

◈ PROFILE

CSE student at **North South University** with **7+ years of hands-on development experience** in backend systems, server architecture, and performance optimization. Delivered 30+ production-grade projects for international clients on Fiverr (Level 2 Seller) and Upwork. Open to international opportunities in **Software Engineering, Cloud Infrastructure, DevOps, or Cybersecurity**.

◈ EXPERIENCE

Backend & Systems Developer — Freelance ⭐ Level 2
Fiverr — Jan 2022 — Present

- Designed and delivered backend systems for **30+ international clients** — custom APIs, database schemas, and server-side logic
- Architected full multiplayer server environments with custom economy, job & game systems using Lua, JavaScript, and MySQL
- Deep server performance optimization — CPU profiling, query tuning, and resolving race conditions
- Developed custom NUI (HTML/CSS/JS) interfaces for interactive in-game frontend systems
- Managed Linux-based servers, configuration, and deployment for international clients

Software Developer — Freelance
Upwork — Sep 2022 — Present

- Delivered custom software solutions and scripting automation for private clients
- Built complete server environments and maintained long-term support agreements
- Integrated third-party APIs and services into existing backend systems
- Worked on NDA and private projects across multiple international communities

Google Apps Developer
Google — Jul 2021 — Oct 2022

- Built Google Apps Script automation pipelines for data processing and workflow management at scale

◈ KEY PROJECTS

REST API + Auth System
Node.js · Express · JWT · MySQL
JWT auth, role-based access control, rate limiting & MySQL integration.

Containerized Server Deploy
Docker · Linux · Nginx · Compose
Multi-service production deployment with Nginx reverse proxy on Linux VPS.

Linux Automation Scripts
Bash · Python · Cron · Linux
Server automation for backup management, log rotation, process monitoring & health checks.

Game Server Backend Engine
Lua · MySQL · JavaScript
Real-time multiplayer backend, DB-driven economy, sub-50ms response — 30+ deployments.

Dynamic NUI Dashboard
HTML · CSS · JavaScript · REST API
Interactive in-game HUD & inventory UI with CSS animations consuming a real-time backend API.

Database Performance Tuning
MySQL · Query Optimization · Indexing
Eliminated N+1 queries, optimized indexes — 60%+ query time reduction in production.

◈ BACKEND & SYSTEMS SKILLS

Node.js · Express · REST API · JWT Auth · Database Design · Query Optimization · Real-time Systems · Server Architecture · TCP/IP · Security Hardening · Performance Tuning · Log Analysis · Process Monitoring · Conflict Resolution

◈ EDUCATION

BSc in Computer Science & Engineering — In Progress
North South University (NSU)
Major: Software Engineering & Network Systems

Higher Secondary Certificate (HSC) — 2017
KC College, Jhenaidah

Secondary School Certificate (SSC) — 2015
Saidpur Cantonment Public School & College
